

FileMailer v4.2 - Generator

Last updated: 21 March 2013

Page is generated once an agent completes it using part 01 of this process. An email link is sent to the intended recipient(s) allowing them remote access to the page. Device options will prescribe certain functionalities based upon the native operating system's ability to process the request. File download acceleration (casper) is only available on desktop at present. Error handling is TBD.

FileMailer v01.b

Job

Notes

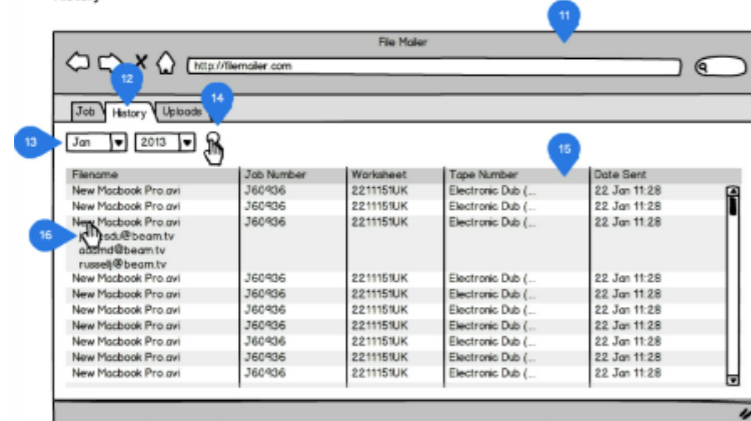

- 1. Search for a Job**
Radio button allows user to select Job ID (default) or Project. If Project is selected then form loads new input field as per above.
- 2. Upload Area**
Drag and drop single or multiple assets here to start upload process. This causes the Uploads tab to include to a percentile value that represents ALL uploads currently in progress.

- 3. Billing info toggle**
Clicking Billing, no charge inserts a text entry field so users can enter a reason no charge is required.

- 4. Add recipient**
Add a new recipient to the list, newly added items are selected, list order TBD (date added?, Alphabetical?)
- 5. Select All / None**
Selects ALL names in the list
- 6. Recipients list**
List is populated dynamically (method TBD) note zebra striping. List should be embedded in the page and a scroll bar appears if the list is longer than 7 entries.

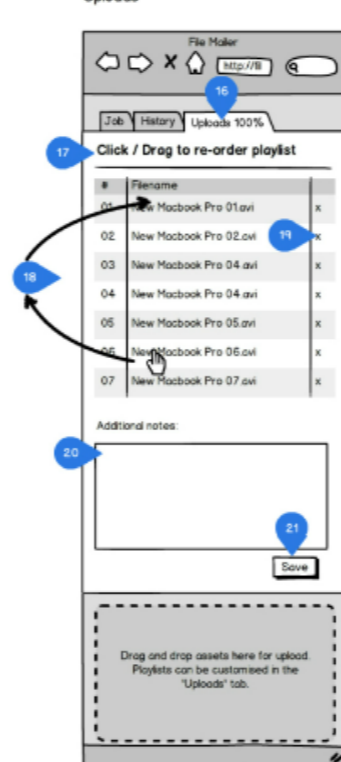

- 7. Submit button (Inactive)**
Submit button is inactive until all fields/requirements are satisfied.
- 8. Submit button (Active)**
Submit button is active when all fields/requirements are satisfied
- 10. Submit button (Done)**
Button changes color and message prompts user to click - this resets the form and takes user back to Step 1

History

- 11. Browser size**
Clicking History tab expands browser window to 805px. Clicking one of the other tabs returns the browser size to the default size.
- 12. Tab**
History tab is shown as active
- 13. Date picker**
Select a Month / Year (default is current Month / Year)
- 14. Search button**
Clicking loads results below.
- 15. Search results**
Info corresponding to dates selected displayed here. Default view is Current Date / Month's data.
- 16. Recipients**
Click filename to expand a row - this reveals a list of recipients for that file.

Uploads

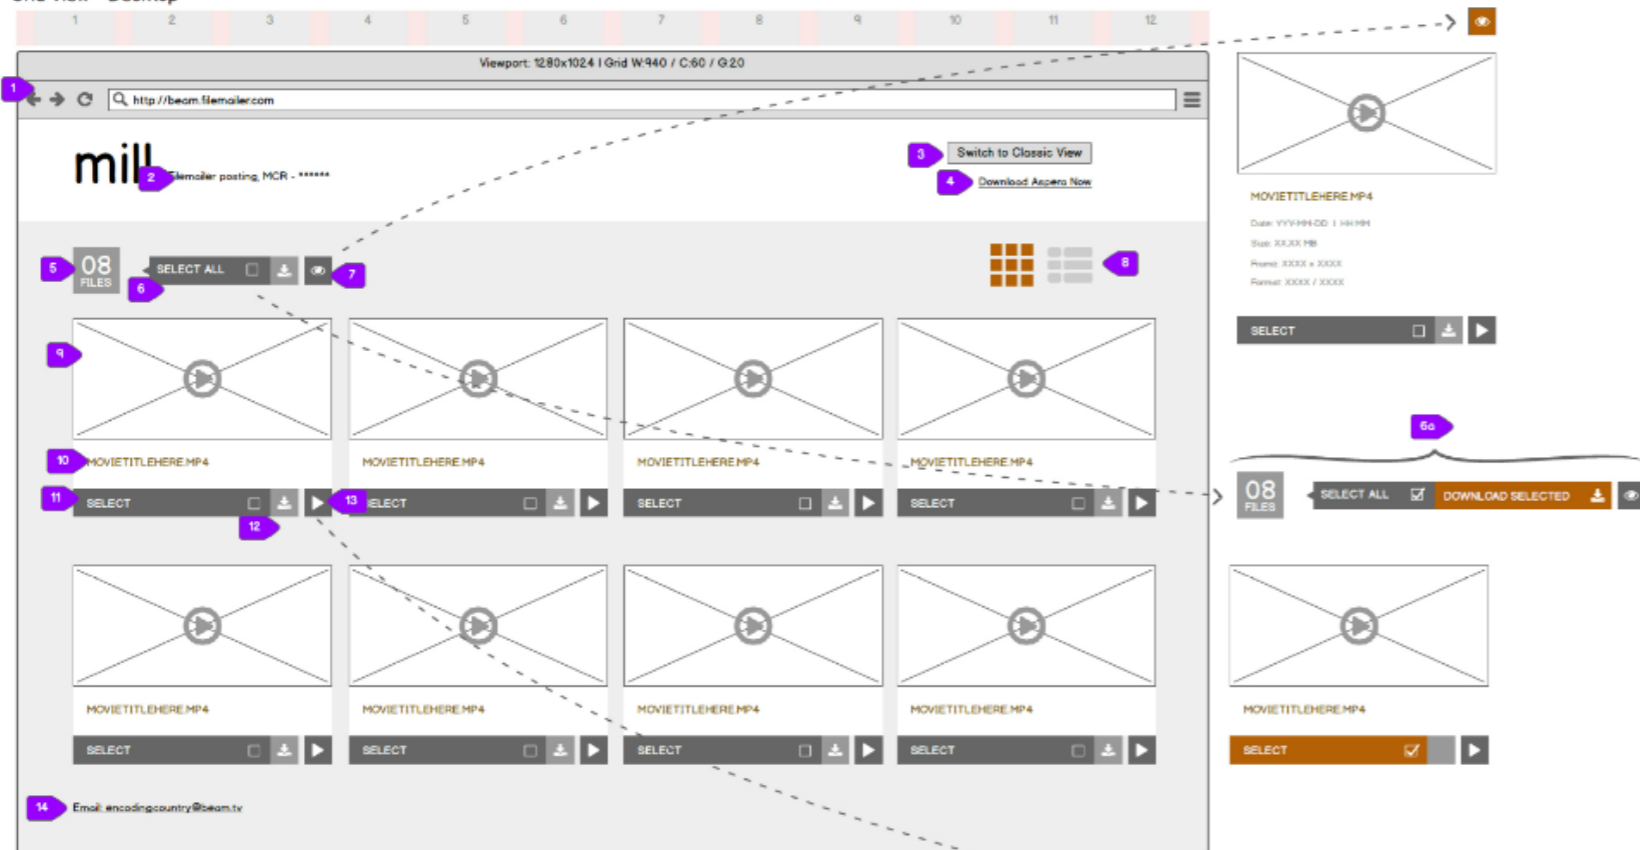

- 16. Uploader tab**
Dragging and dropping single or multiple assets on to the Upload Area(s) initiates the upload process. This causes Uploads tab to include a percentile value that represents ALL uploads currently in progress.
- 17. Playlist**
Uploaded files are shown here in the order they are uploaded from the users hard drive.
- 18. Playlist Order**
The order the files are shown on the Playback page is administered here. Files can be re-ordered by click/dragging them to a new point in the sequence, the files that are above or below the re-ordered file are tabbed down accordingly. Rearranging the playback list can be done while files are still uploading.
- 19. Delete**
Click to delete an uploaded item and remove it from the list. Doing so shifts items below up and re-orders the Playlist Order numbers accordingly.
- 20. Additional notes**
Allows users to add any additional instructions.
- 21. Save**
Save button for "Additional notes" form element.

FileMailer v4.2 - Playback

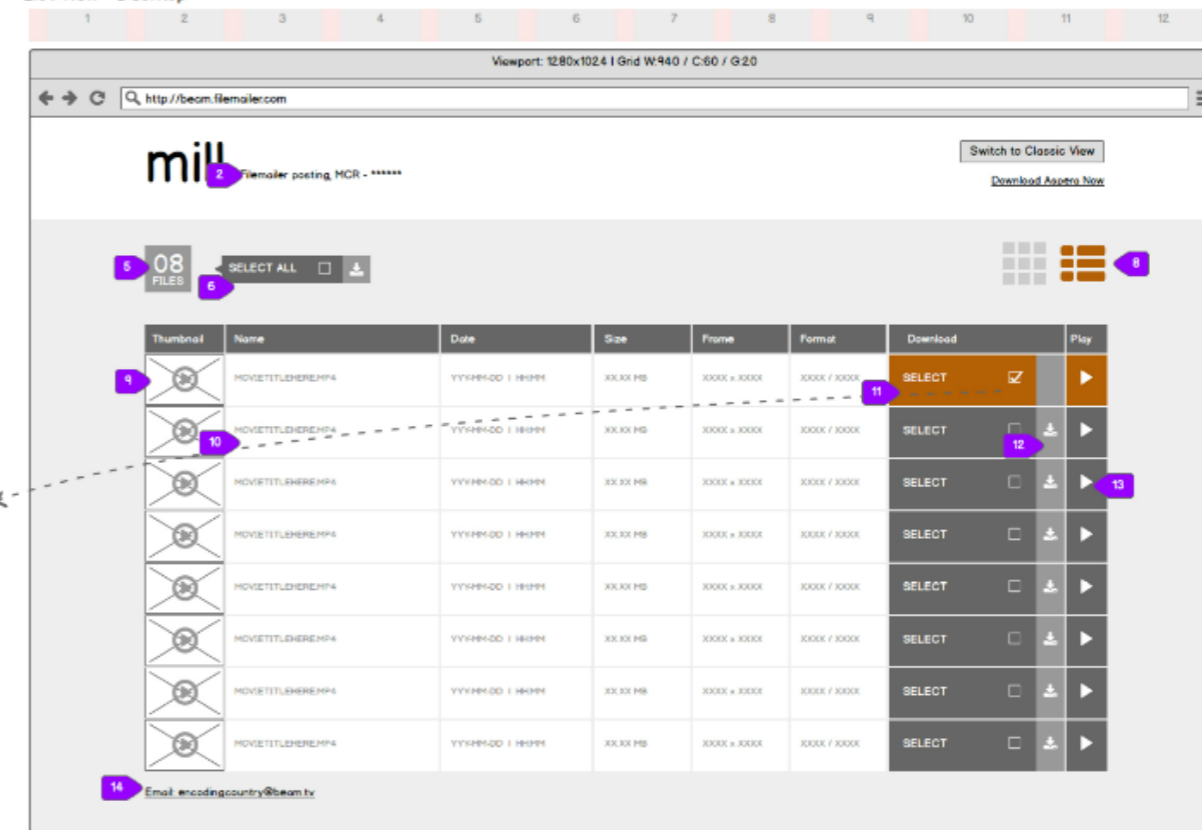

Last updated: 21 March 2013

Page is generated once an agent completes it using part 01 of this process. An email link is sent to the intended recipient(s) allowing them remote access to the page. Device options will prescribe certain functionalities based upon the native operating system's ability to process the request. File download acceleration (aspera) is only available on desktop at present. Error handling is TBC.

Grid view - Desktop

List view - Desktop

Tablet (p)

Mobile
